WE HAVE UX DESIGNERS, FRONT END DEVELOPERS, BACK END DEVELOPERS, CREATIVE CODERS, AUGMENTED REALITY EXPERTS, INTERACTION DESIGNERS, 3D FABRICATION AND MODELING GURUS, EXPERIMENTAL MEDIA ARTISTS, GAME DESIGNERS, CREATIVE DIRECTORS, ART DIRECTORS, CONCEPTUAL DESIGNERS, MOTION CAPTURE SYSTEM DESIGNERS, CONTENT STRATEGISTS, DIGITAL BRANDING THINKERS, PROBLEM SOLVERS, 3D MAKERS, SOCIAL MEDIA WIZARDS, HCI SPECIALISTS, PHYSICAL COMPUTING MASTERMINDS, MEDIA PRODUCERS, EXPERIMENTAL VIDEO ARTISTS, AND MANY MORE.

GROW YOUR TEAM WITH AN IDM STUDENT

ABOUT IDM

The academic programs in Integrated Digital Media (IDM) at NYU Tandon School of Engineering consist of both Bachelors and Masters of Science degrees, as well as an accelerated BS/MS program. In these programs, digital media is explored as a spectrum of practices that range from computer programming (for app development, software design, game development and interaction design) to 2D and 3D graphics (for human-computer interfaces, augmented reality, motion capture, and game design & development) to photography, film, and audio (for media installations, performing arts research, and integration with various mediums). Our students are artists, designers, and creative technologists working in highly fluid industries that reward the creative, the thoughtful, the technical, and the innovative.

Our students are looking for full-time, part-time, freelance, and internship positions.

Contact Eric Maiello // Academic Coordinator // 646.997.0720 // eric.maiello@nyu.edu
My passion lies in my ability to tell meaningful and compelling stories through the use of photography, video, and various other forms of digital media. I live to collaborate with fellow creators to produce media experiences that captivate. While I like to approach all of the work that I do with a sense of zealous optimism, I appreciate the logic of pragmatism and feel that together the two approaches yield the best results.

Adelle Lin creates experiences that integrate the digital and physical in playful ways. Working with a variety of creative technologies, she has exhibited works at Burning Man, A Maze Festival, Maker Faire New York, Come Out and Play Festival, and Different Games Conference. An active member of independent games and maker communities in NYC, by day she creates media works and interactives for the New-York Historical Society Museum and by night is a playful unicorn at NYC Resistor.

---

**Field Recognition**

AR APM translates the coordinate information of APM and UXO casualties previously reported information or possible risk of mines and converts them into visual information from the point of view of the user, informing him that he is close to a mine threat.

**Landmine Location**

Using real-time database information, the system will be able to determine the most likely location of landmines, to provide users accurate and reliable information for avoid or deactivate Anti-personnel mines.

**3D Tracking**

Augmented Reality technology is able today to recognize elements in 3D and put additional layers to human vision to reveal what we cannot see. By comparison with databases of three-dimensional models the user can have a clearer idea about the type of explosive device that is faced.
I am a Chinese student who lives in America for more than 8 years. I can think and act as a Chinese when a US company needs me to, and be a team player with colleagues in an American way. Both my advantage and disadvantage is I have wide interests, so I am not a top expert in any area but my interests are wide enough to make everyone collaborate together. I can also learn new things or tools quickly, so I can fit in anywhere that needs an extra hand.
